

Form Inputs

Anatomy

1. Label/Placeholder, placeholder will act as label when the field has been filled or is in focus mode
2. Content when field has been filled
3. Complementary text, will be displayed when there's a suggestion or an error message
4. Icon will be displayed when you have additional options for this field such as dropdown menu, show/hide password or an Error message
5. Baseline will change states when is in focus mode or when an error message is displayed.

Specs

- Some Rules:
1. Spacing size should be 8px or use 8px increments (When the spacing should be really tight, 4px will do)
 2. Input width should be 100% for most cases, keeping margins consistent (minimum 24px, recommended 32px)
 3. When there's more than one input per line spacing between fields should be 16px
 4. Icons should be 16x16px
 5. Vertical spacing between form fields should be 8px.
 6. Error message container should always be there or the space for it should be kept even when the error is not displayed.
